

SOLUTION REQUIREMENTS

Date	01 July 2026
Team ID	XXXXXX
Project Name	Internal Job Mobility Assistant
Maximum Marks	4 Marks

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority
1	Authentication	The system shall provide secure login and registration for Employees and HR Partners using JWT-based authentication.	High
2	Authorization Levels	The system shall support role-based access control where Employees can access job recommendations and HR Partners can manage job postings and employee applications.	High
3	External Interfaces	The system shall integrate with Google Gemini API for AI-powered job matching, career path generation, and resume analysis.	High
4	Transactions Processing	The system shall process employee profile data, resume uploads, job matching requests, and career recommendations efficiently.	High
5	Reporting	The system shall generate compatibility scores, skill gap reports, career path recommendations, and HR dashboards.	Medium
6	Business Rules	The system shall match employees only with relevant internal jobs based on skills, experience, qualifications, and career goals.	High
7	Compliance to Laws or Regulations	The system shall ensure secure handling of employee data and comply with organizational privacy and security policies.	Medium
8	Other	The system shall allow employees to upload resumes and receive personalized career development suggestions.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	The system should process AI requests and display results with minimal delay.	Response time less than 5 seconds for most requests.
2	Scalability	The system should support increasing numbers of employees and job records.	Support at least 1000 concurrent users.
3	Security & Data Privacy	The system should secure employee data using authentication, authorization, and encrypted communication.	JWT authentication and secure API communication enabled.
4	Reliability & Availability	The system should provide continuous service with minimal downtime.	99% system availability.
5	Usability & Accessibility	The system should provide an intuitive and user-friendly interface accessible across devices.	Responsive UI compatible with desktop and mobile devices.
6	Other (Maintainability)	The system should be modular and easy to maintain and extend.	Modular architecture with separate frontend and backend components.
