

TECHNOLOGY STACK

Date	01 July 2026
Team ID	XXXXXX
Project Name	Internal Job Mobility Assistant
Maximum Marks	2 Marks

TECHNOLOGY STACK

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend Client-Side	React.js, TypeScript, Tailwind CSS, HTML5, CSS3	React provides reusable UI components and efficient state management. Tailwind CSS enables responsive and modern user interface design, while TypeScript improves code maintainability and reliability.
2	Backend Server-Side	Python, FastAPI	FastAPI offers high performance, asynchronous request handling, and automatic API documentation, making it suitable for AI-powered web applications.
3	Database / Data Storage	SQLite, SQLAlchemy ORM	SQLite provides lightweight and efficient data storage, while SQLAlchemy simplifies database interactions through object-relational mapping.
4	Cloud Hosting / Deployment	Uvicorn Server, Local Deployment	Uvicorn serves as a high-performance ASGI server for FastAPI applications and supports efficient local deployment and testing.
5	Version Control & CI/CD	Git, GitHub	Git and GitHub facilitate version control, code collaboration, change tracking, and repository management.
6	Third-Party APIs / Other Tools	Google Gemini API, JWT Authentication, Postman, Visual Studio Code	Google Gemini API powers AI functionalities such as job matching and career path generation. JWT provides secure authentication, Postman supports API testing, and VS Code enables efficient development.
