

Project Executable Files & Execution Guide

Date	03 July 2026
Team ID	XXXXXX
Project Name	Internal Job Mobility Assistant
Maximum Marks	3 Marks

Step 1: Project Links & Access

Resource Type	URL / Access Link
Source Code Repository	https://github.com/RAMPILLAMOUNICA/apsche-ai-job-matching-system
Live Deployed Application	https://apsche-ai-job-matching-system.vercel.app/ - (frontend) https://apsche-ai-job-matching-system.onrender.com/docs#/ - (backend)
Demo Video Link	https://drive.google.com/file/d/1pnmlze3_G_J78AXUGfcsZlbiO-MtVGR/view?usp=sharing

Step 2: Key Executable Files & Folder Structure

S.No	Folder / File Name	Description & Purpose
1	/frontend/src/	Contains React frontend source code, pages, components, and UI logic.
2	/frontend/src/components/	Contains reusable React UI components used across the application.
3	/backend/main.py	Main entry point for the FastAPI backend server.
4	/backend/routes/	Contains REST API endpoints for authentication, job matching, and resume analysis.
5	/backend/ai_service.py	Implements AI functionalities such as job matching, career path generation, and resume analysis using Gemini API.
6	/backend/models/	Contains SQLAlchemy database models for users, jobs, and applications.
7	/backend/database/database.py	Manages database connection and initialization.
8	/backend/.env	Stores environment variables such as Gemini API key

S.No	Folder / File Name	Description & Purpose
		and JWT secret key.
9	/backend/requirements.txt	Lists all Python dependencies required for backend execution.
10	/frontend/package.json	Contains frontend dependencies and npm scripts.

Step 3: Local Setup & Execution Instructions

Step	Action / Terminal Command	Expected Outcome / Notes
1	git clone https://github.com/RAMPILLAMOUNICA/apsche-ai-job-matching-system.git	Downloads the project source code to the local machine.
2	cd backend	Navigate to the backend directory.
3	pip install -r requirements.txt	Installs all required backend dependencies.
4	Configure .env file with Gemini API key and JWT secret	Sets up required environment variables.
5	uvicorn main:app --reload	Starts the FastAPI backend server at http://localhost:8000.
6	Open a new terminal and run cd frontend	Navigate to frontend directory.
7	npm install	Installs frontend dependencies.
8	npm run dev	Launches React frontend at http://localhost:5173.
9	Open browser and access http://localhost:5173	Application becomes accessible for Employees and HR users.
